Nebraska Science Standards

Grades K-1

In the primary grades, students should learn science at their developmental level. Young children develop concepts, vocabulary, and inquiry skills by observing common materials and organisms. When engaged in science inquiry, they develop the ability to ask questions, investigate the world around them, and use their observations to create reasonable explanations for their questions.

Delta Science Modules II and III are inquiry-based and activity centered. The fundamentals of scientific inquiry are imbedded in all DSM II and III at a developmentally appropriate level. The following correlation of the Nebraska Science Standards to the Delta Science Modules, Editions II & III is to show representative examples of investigations from DSMs that address the content standards. A citation does not reflect all of the investigations or activities from Delta Science Modules that might address a particular standard.

Note that Delta Science Modules II & III are developed for grade level clusters of K-1 to provide maximum flexibility. If the Nebraska Standard fits a standard in a grade above or below the recommended level, it may be cited.

1.2 Science as Inquiry		

Science as inquiry requires students to combine processes and scientific knowledge with scientific reasoning and critical thinking to develop their understanding of science.

1.2.1 By the end of first grade, students will develop the abilities needed to do scientific inquiry.

Student demonstrations:

<ul style="list-style-type: none"> • Ask questions about their surroundings. 	<p><u>Finding the Moon</u> Activity 6, 7, & 12</p> <p><u>From Seed to Plant</u> Activity 5, 8, & 11</p> <p><u>Investigating Water</u> Activity 5, 6, 7, 9, & 12</p> <p><u>Observing an Aquarium</u> Activity 8, 9, & 11</p> <p><u>Sunshine and Shadows</u> Activity 5, 7, 8, 9, 10 & 11</p> <p><u>Properties</u> Activity 10 & 12</p>	<p>T.G. 1.7 Science in Personal and Social Perspectives A personal and social perspective of science helps a student to understand and act on personal and social issues. This perspective builds a foundation for future decision making. 1.7.1 By the end of first grade, students will develop an understanding of personal health. Student demonstrations:		
<ul style="list-style-type: none"> Follow safety rules for home and school. 	All DSM Modules contain safety information for teachers and students. For the teachers safety precautions are printed in shaded boxes within the context of the lesson instructions and on student activity sheets.

1.8 History and Nature of Science The history and nature of science illustrates different aspects of scientific inquiry, the human aspects of science, and the role that science has played in the development of various cultures. 1.8.1 By the end of first grade, students will develop an understanding of science as a human endeavor. Student demonstrations:		
<ul style="list-style-type: none"> Recognize the contributions to science made by men and women from many countries. 	Two features in the DSM II & III program provide opportunities for students to become acquainted with scientists having varying cultural backgrounds. One is the <i>Science and Social Studies</i> component that appears in the “Connection” feature that follows every science activity. The other is in the Delta III Science Reader feature <i>People in Science</i> . See the following specific examples: <u>Sunshine and Shadows</u>

<ul style="list-style-type: none"> • Conduct an investigation as an individual. 	<p>Individual inquiry is important to the philosophy of Delta Science Modules. Often students share materials as a group however, the teacher is directed to invite students to perform individual investigations. This is most evident in the “Materials” section of the lesson plan <i>For each student</i>: Also, teachers are requested to duplicate an <i>Activity Sheet</i> for each student.</p>	
<ul style="list-style-type: none"> • Conduct an investigation as part of a team. 	<p>Delta Science Modules encourage and promote cooperative learning strategies. Nebraska Science Standards

Grades 2-4

In the intermediate grades, students learn science concepts, vocabulary, and inquiry skills at their developmental level. Students should develop knowledge and process skills while engaged in science inquiry. They should ask simple questions, design and conduct investigations (in the form of a "fair" test), and present their results to others.

Delta Science Modules II and III are inquiry-based and activity centered. The fundamentals of scientific inquiry are imbedded in all DSM II and III at a developmentally appropriate level. The following correlation of the Nebraska Science Standards to the Delta Science Modules, Editions II & III is to show representative examples of investigations from DSMs that address the content standards. A citation does not reflect all of the investigations or activities from Delta Science Modules that might address a particular standard.

Note that Delta Science Modules II & III are developed for grade level clusters of 2-3, & 3-4 to provide maximum flexibility. If the Nebraska Standard fits a standard in a grade above or below the recommended level, it may be cited.

Nebraska Science Standards

Grades 5-8

At the middle school level, students expand their scientific inquiry skills through knowledge, observations, ideas, and questions. Middle school students will begin to recognize the relationships between explanation and evidence. They understand that background knowledge and theories guide the design of investigations, the types of observations made, and the interpretation of data. Student investigations will shape and modify students' background knowledge.

FOSS modules are inquiry-based. The fundamentals of scientific inquiry are imbedded in all FOSS modules at a developmentally appropriate level. The following correlation of the Nebraska Science Standards to the Full Option Science System (FOSS) is to show representative examples of investigations from FOSS that address the content standards. A citation does *not* reflect all of the investigations or activities from FOSS that might address a particular standard. FOSS modules are inquiry-based.

Delta Science Modules II and III are activity centered and inquiry-based. The fundamentals of scientific inquiry are imbedded in all DSM II and III at a developmentally appropriate level. The following correlation of the Nebraska Science Standards to the Delta Science Modules, Editions II & III, is to show representative examples of investigations from DSMs that address the content standards. A citation does not reflect all of the investigations or activities from Delta Science Modules that might address a particular standard.

Note that Delta Science Modules II & III are developed for grade level clusters of 5-6, & 6+ to provide maximum flexibility. If the Nebraska Standard fits a standard in a grade above or below the recommended level, it may be cited.

8.2 Science as Inquiry

Science as inquiry requires students to combine processes and scientific knowledge with scientific reasoning and critical thinking to develop their understanding of science.

8.2.1 By the end of eighth grade, students will develop the abilities needed to do scientific inquiry.

Student demonstrations:

<ul style="list-style-type: none"> Identify questions and form hypotheses that can be examined through scientific investigations. 	In the DSM II & III Science modules, activities are designed around inquiry and students' questions. Indicators of inquiry in the lesson objectives are in the terms "discover", "predict" or "hypothesize". The following are examples:

8.8 History and Nature of Science

An understanding of the history and nature of science illustrates different aspects of scientific inquiry, the human aspects of science, and the role of science in the development of various cultures.

8.8.1 By the end of eighth grade, students will develop an understanding of science as a human endeavor.

Student demonstrations:

<ul style="list-style-type: none"> Investigate and understand that women and men of various social and ethnic backgrounds, working alone or in teams engage in the activities of science, engineering, and related fields. 	<p>Two features in the DSM II & III program provide opportunities for students to become acquainted with scientists having varying cultural backgrounds. One is the <i>Science and Social Studies</i> component that appears in the “Connection” feature that follows every science activity. The other is in the Delta III Science Reader feature <i>People in Science</i>.
