

Making Pictographs

There are 24 students in Mr. Reeve’s class.

The students answered a survey about the number of hours they spent reading the day before. The pictograph shows the results of the survey.

Key: Each  stands for 1 student.

1 What fraction of the class read only 1 hour?

2 What fraction of the class read 2 hours or more?

3 Jamal said, " $\frac{1}{4}$ of the class read more than I did." How many hours did Jamal read?
