

**Algebra**

Write the number that makes each number sentence true.

$$\textcircled{1} 5 + \underline{\hspace{2cm}} = 10$$

$$\textcircled{2} 8 + \underline{\hspace{2cm}} = 10$$

$$\textcircled{3} \underline{\hspace{2cm}} + 6 = 10$$

$$\textcircled{4} \underline{\hspace{2cm}} + 3 = 10$$

$$\textcircled{5} \underline{\hspace{2cm}} + 3 + 2 = 10$$

$$\textcircled{6} \underline{\hspace{2cm}} + 1 + 4 = 10$$

**Number and Operations**

Use the number line to complete each number sentence.

$$\textcircled{7} 12 + \underline{\hspace{2cm}} = 16$$

$$\textcircled{8} \underline{\hspace{2cm}} + 3 = 25$$

$$\textcircled{9} 27 + 5 = \underline{\hspace{2cm}}$$

$$\textcircled{10} 61 + 5 = \underline{\hspace{2cm}}$$

$$\textcircled{11} 71 + \underline{\hspace{2cm}} = 74$$

$$\textcircled{12} \underline{\hspace{2cm}} + 4 = 81$$

**Problem Solving**

Use a strategy and solve.

- $\textcircled{13}$  Mina and Tim have 43 pencils altogether. Mina has 21 pencils. How many pencils does Tim have?

\_\_\_\_\_

- $\textcircled{14}$  There are 15 boys and 16 girls in Room A. How many students are in Room A?
