

Adding and Subtracting Fractions with Like Denominators

Complete the chain so that the fractions in the same big shapes are the same.

$$\boxed{\frac{13}{29}} + \begin{array}{|c|} \hline \square \\ \hline \square \\ \hline \end{array} = \bigcirc$$

$$\bigcirc - \begin{array}{|c|} \hline \square \\ \hline \square \\ \hline \end{array} = \triangle$$

$$\triangle + \begin{array}{|c|} \hline \square \\ \hline \square \\ \hline \end{array} = \text{oval}$$

$$\text{oval} + \begin{array}{|c|} \hline \square \\ \hline \square \\ \hline \end{array} = \text{parallelogram}$$

$$\text{parallelogram} - \begin{array}{|c|} \hline \square \\ \hline \square \\ \hline \end{array} = \boxed{\frac{13}{29}}$$
