

Adding and Subtracting Fractions with Unlike Denominators

Find a common denominator in order to add the fractions.

$$1 \quad \frac{2}{3} + \frac{5}{6} + \frac{1}{2} = \frac{\square}{\square} + \frac{\square}{\square} + \frac{\square}{\square} = \frac{\square}{\square}$$

$$2 \quad \frac{7}{8} + \frac{3}{4} + \frac{1}{6} = \frac{\square}{\square} + \frac{\square}{\square} + \frac{\square}{\square} = \frac{\square}{\square}$$

$$3 \quad \frac{1}{2} + \frac{1}{3} + \frac{3}{5} = \frac{\square}{\square} + \frac{\square}{\square} + \frac{\square}{\square} = \frac{\square}{\square}$$

Find a common denominator for the fractions in order to subtract the numbers.

$$4 \quad 5\frac{1}{3} - 3\frac{1}{5} = \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$$

$$5 \quad 6\frac{1}{4} - 4\frac{3}{8} = \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$$
